BENEFITS

KapStone's bag and sack kraft paper grades are manufactured using high quality furnish that ranges from 100% virgin to recycled fiber content. The kraft pulping process together with KapStone's manufacturing excellence provides outstanding sheet formation and superior tear and burst properties.

Bag and sack grades are available in machine finish (MF) and soft calendered (SC) options.

- *Machine Finish* - gives the sheet a natural, matte finish providing an excellent base for converting and printing
- *Soft Calendered* - provides a smooth, glossy surface ideal for food service sacks and specialty process printing

We take pride in reducing variability across the entire manufacturing process. Our intense focus on variability reduction drives excellent profiles in the machine and cross directions - delivering efficiencies to our customers during the converting process.

Our high quality virgin and recycled fiber furnish provides a clean, smooth, and low lint surface for optimal sheet printing.

We are committed to producing sustainable products for our customers that adhere to multiple forestry certification standards. Through this commitment, KapStone offers end products that are biodegradable, compostable, and recyclable.

SFI® Certified Sourcing and Chain of Custody

PEFC™ Chain of Custody

FSC® Chain of Custody

Compliant with the Lacey Act and EUTR (European Union Timber Regulations)

Compliance with USFDA - 21 CFR §176.170 and 21 CFR §176.180 Allergen free
