www.ozonesolutions.com

The CVST / CVHP Check Valve should stop all water flow since it is a positive sealing device. If the Check Valve fails, the Water trap will drain off excess water

CVLP Check Valve is a Kynar Check Valve with Viton Seals. If both the CVST/CVHP Check Valve, and Water Trap fail, the CVLP is a great backup safety device.

Water may drain from the trap slowly, this water can be plumbed to another location as long as the hose ID is at least 3/8-in and distance is no greater than 5-ft.
